

I am an XM subscriber for more than a year and a half. My subscription to XM is a decision that I made because over the air broadcasts were repetative and not meeting my needs. Local orientated programing, such as news traffic and weather is a terrific addition to the programing that adds to my safety as I travel.

I am upset that a special interest group for the broadcasters is trying to influence a decision from the FCC that would limit my reception via satellite of this typr of programing. I would like you to reject NAB's petition 04-160.

Tell them to go back to the drawing board and start to provide some original creative programing. XM does and that is why I pay for their reception.!!
